CERTIFICATE

This is to certify that, with **USN:U16NB24S0148**, has successfully completed the mini project titled "**COSTOMER RELATIONSHIP MANAGEMENT SYSTEM**" during the academic year **2025-2026**. This project work has been carried out as per the curriculum requirements of **NIMS** for **BCA 4thSemester** , under our guidance and supervision.

INTERNAL GUIDE: *Prof. Priyanka Yadav*

SIGNATURE

COURSE & SEM: **BCA 4th SEM**

ACKNOWLEDGEMENT

“Task successful” brings happiness, but that happiness becomes truly meaningful only when we recognize the people who supported us throughout the journey. Success belongs not only to the one who completes the work, but also to those whose constant guidance, encouragement, and support make the success possible.

I am extremely grateful to all the individuals who guided, inspired, and supported me in the successful completion of my mini project. I consider myself fortunate to have worked on this project, which will serve as an important asset in my academic profile.

First and foremost, I express my sincere gratitude to **The Principal, NIMS College**, for providing the opportunity and the necessary facilities to carry out this project.

I also extend my heartfelt thanks to **The Head of the Department, BCA**, for encouragement, support, and for creating a positive academic environment.

My special thanks to my internal guide **Ms. Priyanka Yadav**, Assistant Professor, Department of BCA, for her continuous guidance, valuable suggestions, and support throughout the duration of the project.

Abstract:

The Customer Relationship Management (CRM) System is designed to help businesses manage their interactions with customers efficiently. It allows storing customer data, tracking communication, managing leads, and improving customer service.

The main purpose of this project is to simplify customer data handling and improve business relationships through organized and accessible information.

Introduction:

The CRM system is a web-based application that helps organizations manage customer information, track interactions, and improve customer satisfaction. It provides a centralized platform where all customer-related data is stored and accessed easily.

Problem Statement

Many businesses face challenges in managing customer data manually, which leads to:

- Data loss or duplication
- Poor customer communication
- Lack of organization

This project solves these problems by providing a digital system to manage customer relationships efficiently.

Objective:

- To store and manage customer data in one place
 - To track customer interactions and communication
 - To improve customer satisfaction
 - To automate business processes
 - To provide easy access to customer information
- Tools & Technologies:

Tools & Technologies:

Programming Language

- JavaScript / Python / PHP (use what you used)

Software / Tools

- VS Code
- GitHub
- Browser (Chrome)

Database

- MySQL / MongoDB

Source Code:

```
from flask import Flask, request, jsonify
import sqlite3

app = Flask(__name__)

# ----- Database Setup -----
def init_db():
    conn = sqlite3.connect("crm.db")
    cursor = conn.cursor()

    cursor.execute("""
    CREATE TABLE IF NOT EXISTS customers (
        id INTEGER PRIMARY KEY AUTOINCREMENT,
        name TEXT,
        email TEXT,
        phone TEXT
    )
    """)

    conn.commit()
    conn.close()

init_db()

# ----- Add Customer -----
@app.route("/add_customer", methods=["POST"])
def add_customer():
    data = request.json
    conn = sqlite3.connect("crm.db")
    cursor = conn.cursor()

    cursor.execute("INSERT INTO customers (name, email, phone) VALUES (?, ?, ?)",
        (data["name"], data["email"], data["phone"]))

    conn.commit()
    conn.close()

    return jsonify({"message": "Customer added successfully"})
```

```

# ----- Get All Customers -----
@app.route("/customers", methods=["GET"])
def get_customers():
    conn = sqlite3.connect("crm.db")
    cursor = conn.cursor()

    cursor.execute("SELECT * FROM customers")
    rows = cursor.fetchall()

    conn.close()

    customers = []
    for row in rows:
        customers.append({
            "id": row[0],
            "name": row[1],
            "email": row[2],
            "phone": row[3]
        })

    return jsonify(customers)

# ----- Delete Customer -----
@app.route("/delete_customer/<int:id>", methods=["DELETE"])
def delete_customer(id):
    conn = sqlite3.connect("crm.db")
    cursor = conn.cursor()

    cursor.execute("DELETE FROM customers WHERE id=?", (id,))

    conn.commit()
    conn.close()

    return jsonify({"message": "Customer deleted"})

# ----- Run Server -----
if __name__ == "__main__":
    app.run(debug=True)

```

Output:

CRM Pro

Search customers, leads...

Customers

1 total records

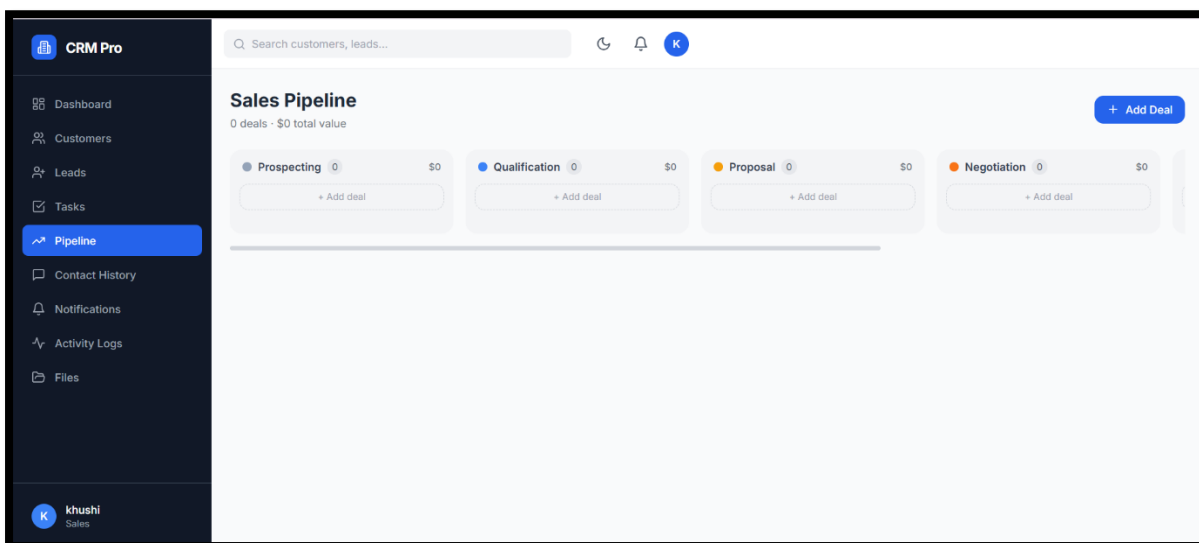

Export Add Customer

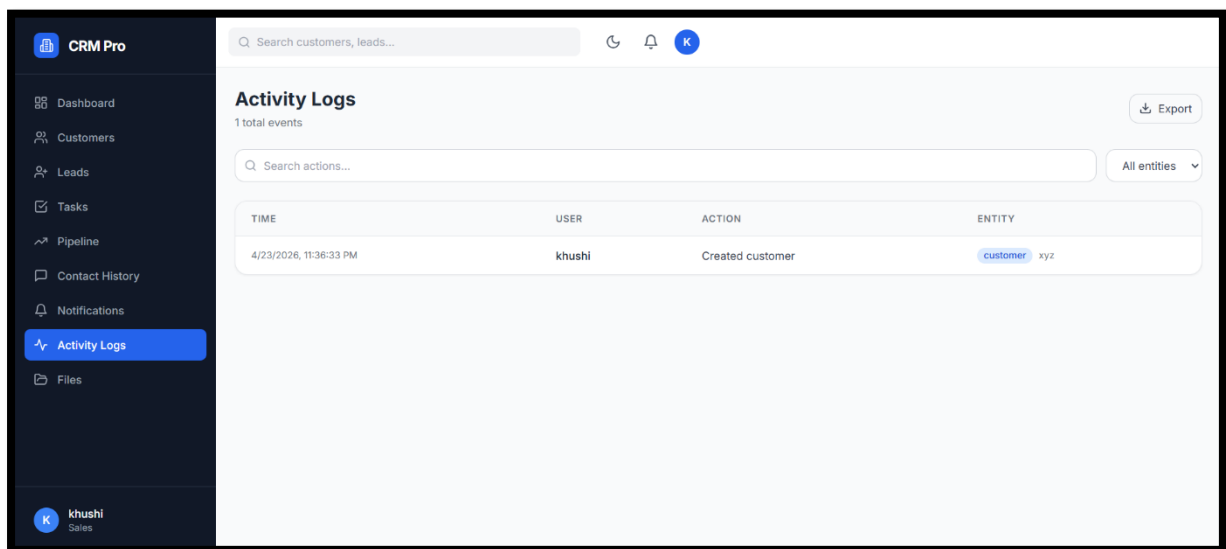

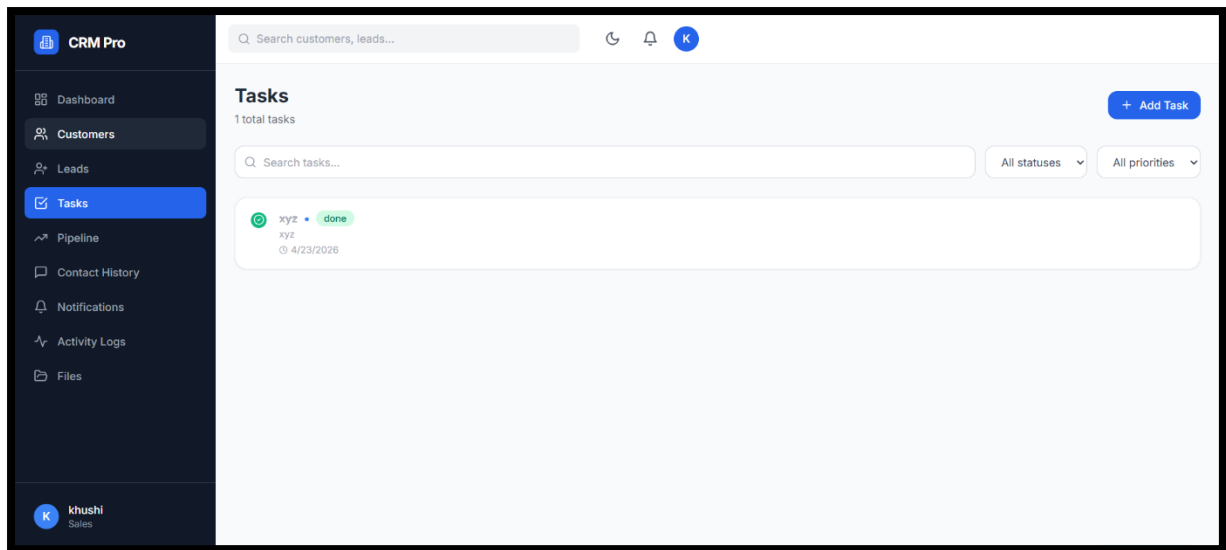

Search by name...

All statuses

NAME	CONTACT	COMPANY	STATUS	ACTIONS
xyz baliari, India	xyz@gmail.com 1234567890	xyz	active	

khushi Sales

Conclusion:

The Customer Relationship Management System successfully helps in managing customer data and improving business efficiency. It provides an organized and user-friendly interface for handling customer information.
